

JUNIOR FILTER HOUSING: OPTIMIZED FOR SMALL VOLUMES

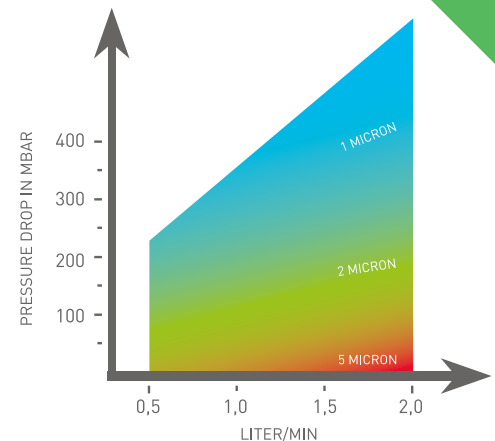

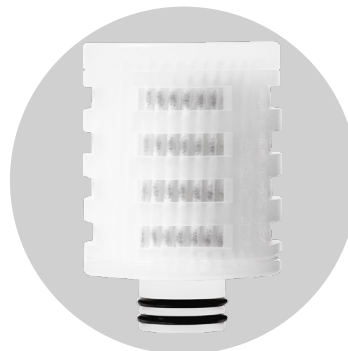

Designed for simple, quick and efficient liquid filtration applications.

FEATURES

- sanitary clamp; quickly assembled and disassembled for rapid change outs
- easy to clean
- compact design (48mm diameter x ca 70mm height) results in minimal liquid loss
- meets your needs of small scale units
- available in 316L or PVDF
- optional displacer to reduce further the hold-up volume
- various connections options (hose barb, threads)

The filters cartridges that have to be utilized in the Junior housings are available in different materials (PP, PA, PE) and in micron ratings from 0.05 to 100 micron. Please consult Arranged for more details on available filter media combinations.

This diagram intends giving you an indication of the expected pressure drop over the filter at different micron ratings. Depending on the type of filter media used (eg Polypropylene or Glass Fiber), the pressure drops can differ substantially, therefore the large scatter on the diagram.

AVAILABLE MODELS

PART NUMBER ASSEMBLY		
P015-	0010 = 4mm barb	S = SUS316L
Example:	0011 = G1/8" Female	V = PVDF
P015-0020-V	0020 = 6mm barb
